asset management

Basic Details

## Statement of Commitment

Responsible investing (RI) is one of the core principles from which Thematics Asset Management was built. Since the company's formal inception in September 2019, RI has been part of the four pillars of our investment philosophy that guide all our investment. As an investor with a thematic lens, these core pillars include: (1) emphasis on secular growth, which is derived from the primary forces of Technology, Demographics, Globalization and Scarcity that are causing the “tectonic” shifts shaping tomorrow's world and affecting companies as well as the flow of money; (2) focused approach, where we look only in targeted segments of the enjoying long-term secular growth underpinned by structural and long-lasting forces; (3) unconstrained style, with our forward-looking, benchmark-agnostic, diversified, and with global equity exposure; and (4) responsible investing, which we believe is integral to reducing risks for our clients as well as to creating long-term value for our investors and for the society as a whole.

Our full response to the European SRI Transparency Code can be viewed below and is also available on our website.

## Compliance with the Transparency Code

As member of the AFG (French Asset Management Association) and Forum pour l'Investissement Responsable (FIR), we commit to providing the highest transparency, taking into account the regulatory and competitive environment in which we operate.

12 April 2021

## List of funds subject to this Transparency Code

### Fund Names

1. Thematics AI & Robotics
2. Thematics Safety
3. Thematics Water
4. Thematics Subscription Economy
5. Thematics Meta
6. Thematics Global Alpha Consumers
7. Thematics Wellness

### SRI Strategy used

1. Thematic/sustainability theme
2. Screening
3. Norms-based research
4. ESG Integration
5. Voting and Engagement

### Asset Class

Global equity, long only

### Assets Under Management

In EUR million, as of 31 March 2021

Thematics AI & Robotics	357.8
Thematics Safety	631.6
Thematics Water	234.4
Thematics Subscription Economy	188.2
Thematics Meta	624.1
Thematics Global Alpha Consumers	70.6
Thematics Wellness	0

French ISR Label

## The Fund Management Company

### Overview and ownership

Based at 43, Avenue Pierre Mendès France, 75634 in Paris, France, Thematics Asset Management (“Thematics AM”) is an affiliate of Natixis Investment Managers. It provides investors with access to a wide range of high conviction and active global thematic strategies, including Safety, Water, the Subscription Economy, Artificial Intelligence & Robotics, Meta, and Global Alpha Consumers, and Wellness.

### Our approach to Responsible Investing

Responsible Investing is embedded across the three phases of the investment process of Thematics AM: Define, Select and Act.

As part of Natixis Investment Managers (Natixis IM), our Responsible Investment framework is also guided by and is aligned with the Group’s global responsible investment policy, which sets out its convictions, standards, and governance considerations with a view to implementing sustainable practices across the group.

The guiding principles of our responsible investment framework comprise the implementation of:

- Exclusion thresholds to minimise our adverse impacts
- Integration of environmental, social, and governance factors for risk management and value creation
- Stewardship and active engagement

Please refer to the 2<sup>nd</sup> part of this document “Approach to Responsible Investment” to get more details on how we incorporate the different approaches as identified above across our investment processes.

### Our Philosophy and Belief

At Thematics Asset Management (‘Thematics AM’), responsible investing is one of the 4 ‘pillars’ on which we base our investment philosophy, along with a need for secular growth-driven opportunities, being focused on our investment themes and taking an unconstrained approach. For this reason, environmental, social and governance (ESG) considerations are included at each step of our investment process.

We believe ESG integration leads to better-informed investment decisions. The analysis of ESG factors is crucial to de-risking the portfolios and delivering excess returns. We also believe that our fiduciary duty is to generate superior performance for our clients, and it is by integrating sustainability factors that we can fully assess and monitor operational, financial, and reputational risks. We are convinced that the consideration of ESG factors supports sustainable value creation for asset owners.

## Our Principles

Consistent with our philosophy and belief, we are a signatory of the **UN Principles for Responsible Investment**. We are committed:

- to incorporate Environmental, Social and Corporate Governance (ESG) issues into investment analysis and decision-making processes;
- to be an active owner and to incorporate ESG issues into our ownership policies and practices;
- to seek appropriate disclosure on ESG issues by the entities in which we invest;
- to promote acceptance and implementation of the Principles within the investment industry;
- to work with the PRI Secretariat and other signatories to enhance their effectiveness in implementing the Principles;
- to report on our activities and progress towards implementing the Principles.

We submitted our first voluntary PRI report in March 2020, as a recent signatory of the UN PRI (and as recently formed organisation). As such, the link to our answers to the questionnaire is not available yet, but we can provide the document on request. We are currently preparing our first mandatory PRI Report that will be submitted in April 2021.

## CSR

As a key source of financing for the economy, Natixis, of which Thematics is an affiliate, has a role to play in the transition to a sustainable development, and in 2017 decided to further its environmental and social responsibility (ESR) ambitions. Environmental and Social Responsibility – or ESR – has been one of the key components of Natixis' 2018-2020 strategic plan, New Dimension. It involves managing the social and environmental risks of our business operations, but it is also a performance driver at the Group level, fostering efforts to develop innovative products and solutions to support our clients as they make their own transition to a more sustainable business model. The ESR policy rests on three key pillars: Green & Sustainable business development, direct impact and onboarding, as well as ESG risk management. As such, we believe that the Thematics AM approach towards ESG integration is inspired by and consistent with our parent company CSR/ESR approach.

Access to the Natixis group CSR/ESR portal including policy documents and other related resources can be found by following the link below:

[https://www.natixis.com/natixis/jcms/tki\\_5048/en/esr](https://www.natixis.com/natixis/jcms/tki_5048/en/esr)

## Responsible Investment Products and Resources

### Our Funds & their characteristics

Thematics AM currently manages eight strategies, seven of which incorporate ESG considerations into their investment process. The first four (below) launched in December 2018, the Subscription Economy Fund launched in December 2019. The parent company transferred the management of Global Alpha Consumer to Thematics AM in October 2020. Finally, the new Wellness fund is launched in 15 April 2021.

As of today, the AuM of the strategies amount to:

- Natixis Thematics Meta (USD 730.2 million/ EUR 624.1 million)
- Natixis Thematics AI&Robotics (USD 418.6million/EUR 357.8 million)
- Natixis Thematics Water (USD 274.2 million/EUR 234.4million)
- Natixis Thematics Safety (USD 739 million/EUR 631.6 million)
- Natixis Thematics Subscription Economy (USD 220.2million / EUR 188.2million)
- Natixis Thematics Global Alpha Consumer (USD 82.6 million/ EUR 70.6 million)
- Natixis Thematics Wellness (0)

Source: Thematics AM, as of 31 March 2021

All funds are global, long-only, high conviction, listed equity products. All funds are global, long-only, high conviction, listed equity products. Water, Safety, and Wellness funds are Article 9 products under the SFDR criteria.

## Governance and Implementation of the Responsible Investment Policy

The governance and implementation of Thematics AM's Responsible Investing Framework is managed by the Responsible Investment Committee, composed of the following:

- Chief Investment Officer
- Risk and Compliance Officer
- Head of Responsible Investing (RI)
- ESG Specialist

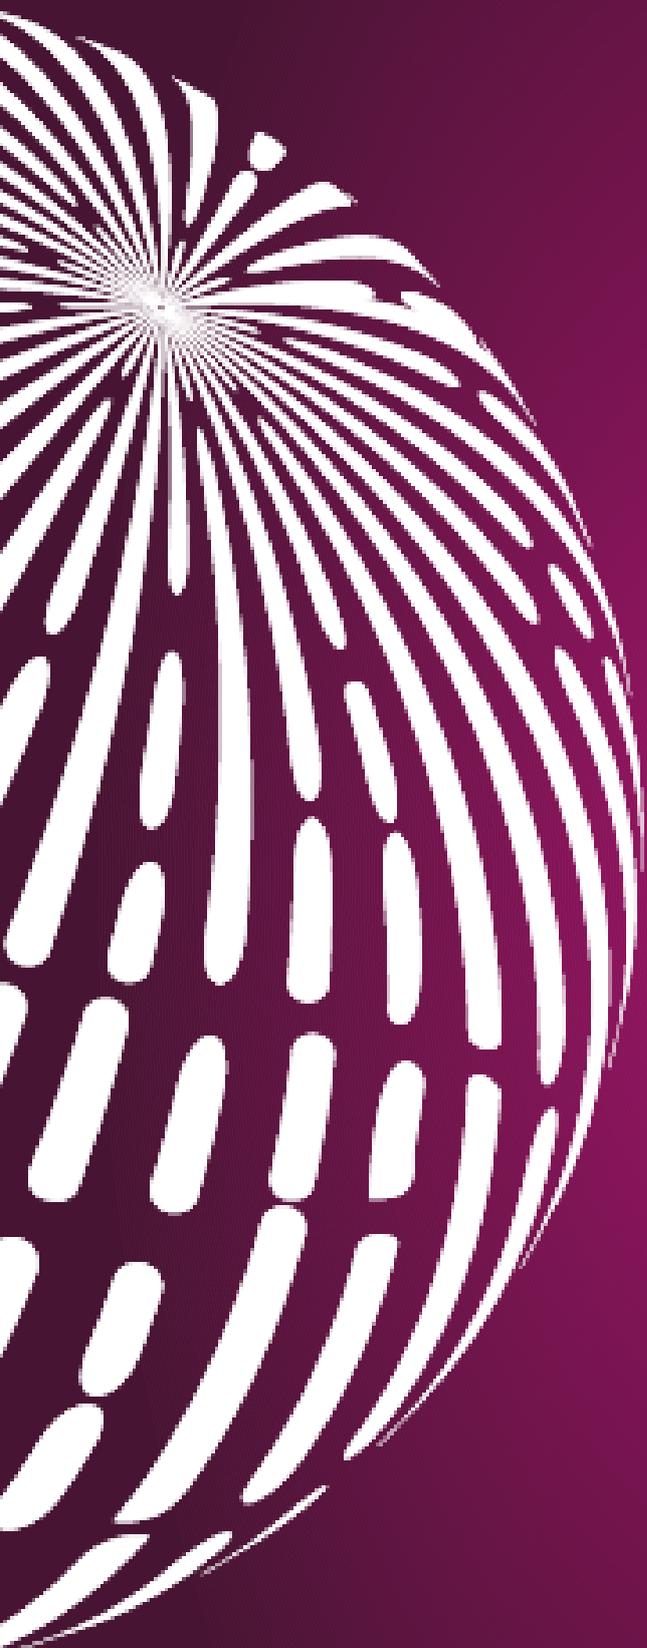

Primarily, the Head of RI, supported by the ESG Specialist, are in-charge of the following:

1. ensure that the RI policy and procedures are operationalised across all funds
2. to provide guidance on exclusions, votes and engagements
3. maintain an understanding of international best practices on ESG management

The Chairman and Chief Investment Officer oversees the implementation. The Compliance Officer ensures alignment of the RI policy against global and local regulations and standards.

At the specific and individual fund level, each PM fulfils a dual role, performing both the company / stock analyst role on an investable universe of reasonable size, as well as portfolio management duties and associated responsibilities whereby strongest convictions are

selected to create a concentrated yet diversified portfolio. This analytical role includes ESG factors at the portfolio and stock-specific level. The combined and individual expertise of the strategy portfolio managers following decades of combined investing experience, allied to an integrated risk-mapping procedure that scores companies in the portfolios, inputs from 3rd party resources, as well as voting, engagement and regular management meetings with portfolio companies and forms the basis of our ESG capability/expertise.

Approach to  
Responsible  
Investment

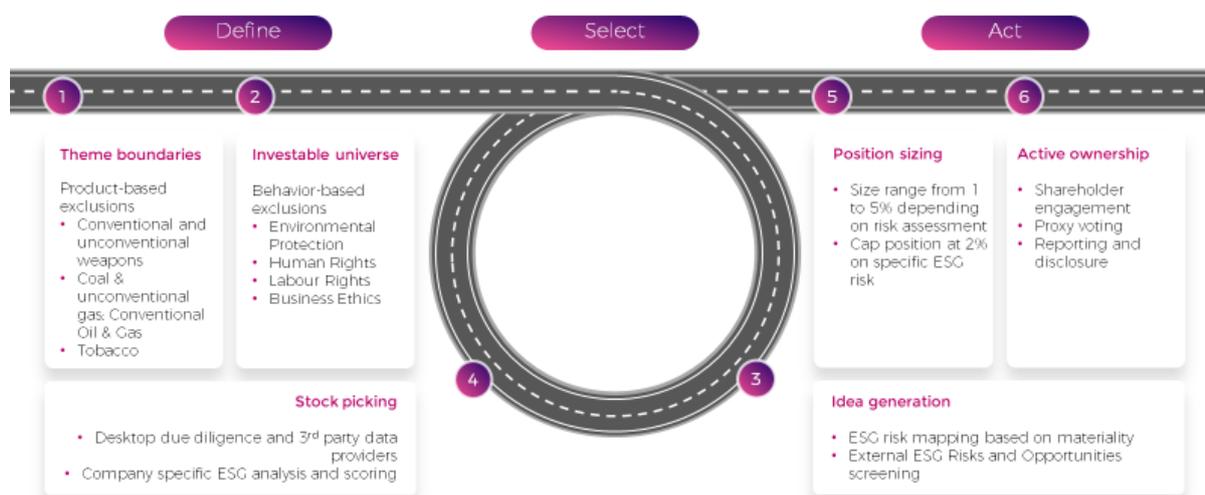

## Core components of the responsible investment framework

Responsible Investment is embedded across the three phases of the investment process of Thematics AM: Define, Select and Act.

Our responsible investment framework comprises the implementation of the following:

- Exclusion thresholds to minimise our adverse impacts
- Integration of environmental, social, and governance factors for risk management and value creation
- Stewardship and active engagement

These core strategies are implemented at different stages of the investment process. The next section provides an overview of each strategy.

## Exclusionary screening

### Product-based screening

As a sustainable and responsible investor, we seek to lower if not eliminate our adverse impacts to society and the environment. Using a combination of third-party data from established ESG rating and research agencies and our own internally-set ESG definitions and risk materiality assessment, our Portfolio Managers and in-house ESG Specialist systematically screen all of our strategies for any exposure to activities that have negative impact from a sustainability and/or ethical perspective. These activities include the following:

- Coal
- Unconventional oil & gas
- Conventional oil & gas
- Nuclear energy
- Companies in the electric utilities sectors with carbon intensities not aligned with the Paris agreement.
- Conventional weapons

- Small arms
- Illegal and controversial weapons
- Tobacco

Detailed discussion of our exclusion policy is provided in our Responsible Investment Policy 2021 document.

### *Behaviour-based screening*

In addition to the exclusion criteria based on product or activity involvement, Thematics AM also excludes companies that are non-compliant or systemically violate, demonstrate severe negative impact, or indeed cause significant harm relative to key social and environmental issues covered by internally agreed standards, norms, taxonomies, and regulations. These would include but not be limited to the International Bill of Human Rights, ILO Conventions, OECD Guidelines for Multinational Enterprises, the UN Global Compact, and EU SFDR Social Criteria. The assessment is informed by data from third-party providers, additional research by Portfolio Managers and the ESG Specialist, as well as additional information from Portfolio Managers' engagement with companies.

The key social and environmental factors against which we exclude companies on the basis of their behaviour or performance are the following:

- Environmental protection
- Human rights
- Labour rights
- Business ethics

### ESG Integration

Thematics AM has developed a proprietary ESG scoring framework composed of targeted and focused sets of metrics deemed most material to its range of thematic funds. These metrics represent two things:

- the most material risks that companies in our funds are exposed to, linked to the nature of their activities, which could translate to financial and reputational risks if unmanaged, and;
- the most material areas where companies could have adverse impact, due to the nature of their activities.

### *Materiality*

Whilst assessing investment opportunities within the investable universe of each them, Thematics AM portfolio managers will review eight categories of ESG criteria to assess the ESG risk.

THEMATICS AM ESG CRITERIA

Detailed discussion of the different ESG criteria is provided in the Responsible Investment Policy document – ESG Integration section.

*ESG Risk Weighting Across Funds Based on Materiality*

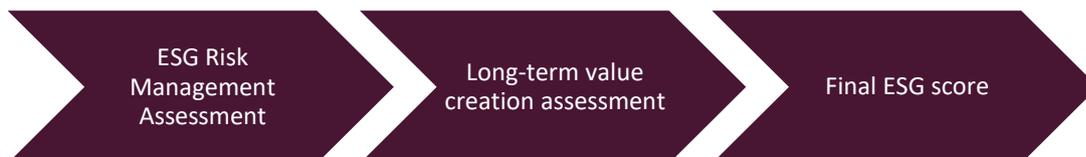

Whilst we acknowledge the interconnected nature of environmental, social, and governance factors, we think that there are specific topics and criteria which are more material than others depending on the business models, the geographies or the industries involved. As such, Thematics AM selects relevant criteria for businesses in the universe at the theme and sub-theme levels. Portfolio Managers base their selection on their expertise and knowledge of sectorial business models. They consider ESG criteria that account for material environmental, social and governance issues.

This process includes the following steps:

1. Identifying and flagging the most material ESG factors for each sub-theme. Factors with the highest materiality are assigned a ‘weight’ of 2. Factors that are assessed to have Medium materiality are assigned a ‘weight’ of 1.
2. Assessing these scores based on the strategy allocation to identify the most relevant sustainability risk for the strategy.

*Company-Specific ESG Analysis*

To arrive at the ESG score of a company, we follow a 3-step process:

1. ESG Risk Management Assessment

In this first phase, Portfolio Managers assess and score companies against the material ESG metrics identified in the ESG Risk Mapping and Weighting. This scoring is informed by

PM's desktop research, using publicly available information and third-party sustainability ratings data<sup>2</sup>. The performance analysis and scoring is focused on the 11 ESG risk metrics as defined above. The review is primarily focused on the risk exposure versus risk management performance of companies.

## 2. Value-creation assessment

This second layer review is aimed at fully and holistically capturing the long-term value creation capability of companies. Specifically, Portfolio Managers aim at this stage to assess: (a) a company's alignment with the sustainable development goals, looking at whether it has overall positive or negative net impact, contributing positively to the achievement of the goal or obstructing it; (b) whether a company is meeting its obligations to sustainability standards using controversies data as a metric; and (c) full understanding of the company through direct engagement to uncover any material information not captured by third-party data provider or in-house research.

## 3. Final ESG score

Relying on the output of the first two steps, portfolio managers attribute a binary ESG score to the company:

- a. The company is scored 1 if no ESG major risk has been identified and/or if major ESG risks are mitigated by appropriate commitments and approaches which have already demonstrated results.
- b. The company is scored 0 if an ESG risk is identified and is not covered by any appropriate commitment or approach.

### *Frequency of review of ESG information*

ESG risk and opportunity is reviewed on an ongoing, daily basis – with the portfolio managers continually receiving company and industry updates. In terms of published ESG scores for the portfolio (from both a risk and opportunity standpoint), this is a metric that is published every month for inclusion in the fund factsheets (covered in detail in the Reporting section of this report). More broadly, the Thematics AM ESG committee reviews the investable universe of each strategy each year and makes sure it does not include any companies involved in any activities excluded at theme level. The committee uses data from multiple third-party providers, ie screening.

### *Resources used to undertake ESG analysis*

The PM/analyst will draw from a range of resources when analyzing a company. The data used to form an overall opinion on a company is a synthesis of outputs that come from a combination of some or all of the following: the PM's network of contacts from the broader relevant industry, equity sell-side analysts and research documents, third party ESG/Impact data providers (specifically ISS and Sustainalytics), as well as the company management itself.

## Engagement

Thematics AM engages with management teams on ESG topics.

In order to gain deeper understanding of the company key issues, to proactively anticipate issues and to mitigate ESG risks of their portfolios, the individual portfolio managers maintain a constructive dialogue with the company management. ESG residual risks identified in the company's '**ESG Profile**' are further investigated and discussed at least annually during meetings or conference calls with the management team.

On a critical issue, or when the management is not available for a dialogue, the portfolio manager might also send a letter to the Chairman.

As part of our continued evolution in our responsible investing journey, we will be sharing and updating our priority engagement themes later.

## Proxy Voting Policy

### *Voting Principles*

Thematics AM has defined eight major voting principles it refers to for the exercise of voting rights at general meetings. These principles reflect the best corporate governance practices.

- **Board composition**
  1. Board independence
  2. Board renewal
  3. Relevance of directors' expertise
- **Level of commitment of directors**
  1. Directors presence on boards
  2. Directors other executive or non-executive responsibilities
- **Level and structure of executive compensation**
  1. External analyses of peers compensation
  2. Alignment of medium and long-term interests
- **Limitation of management's ability to issue capital**
  1. Limitation to issue capital without consulting shareholders and without dilution prevention measures

### *Implementation of Voting Policy*

Thematics AM is supported by an external proxy voting platform to implement its voting policy, which:

- informs Thematics AM of the holding of general meetings;
- analyses the resolutions according to the Thematics AM voting principles;
- alerts on resolutions contrary to its voting principles and advises on proxy voting issues.

Portfolio manager review the external independent analysis and transmit their final proxy voting decisions to the platform, which facilitate the vote execution.

The platform provides annual records and reports on the votes performed.  
We publicly disclose a report of our proxy voting activity on a yearly basis.

**Securities lending**

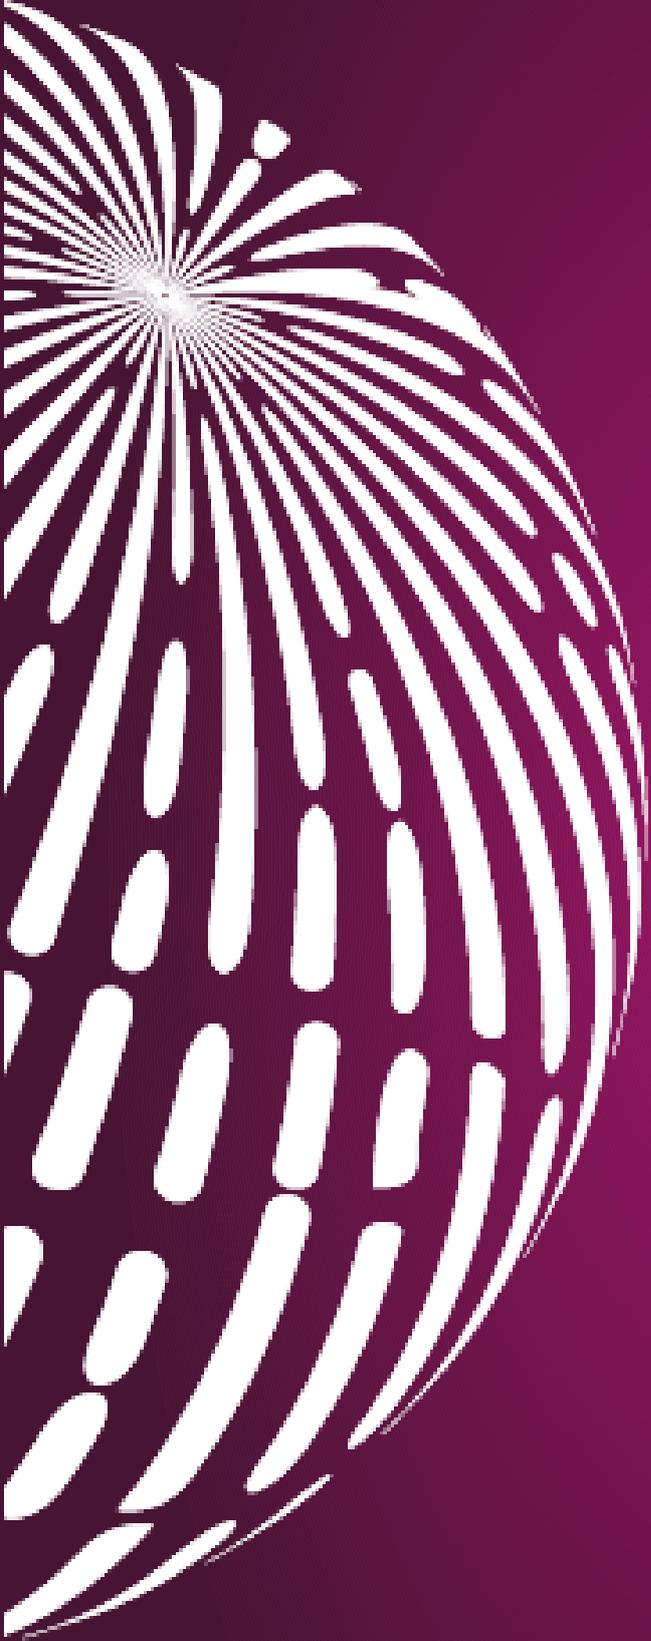

Thematics AM does not engage in securities lending

**Derivatives**

Thematics AM does not use derivatives

**Unlisted entities / securities**

Thematics AM does not invest in unlisted entities / securities

RI Strategies in the  
Fund Management  
Process

## Responsible investment considerations across the investment process

Thematics AM responsible investment strategies are embedded across the three main phases of the investment process: Define – Select – Act.

### Define

At the first stage of our investment process, we ‘Define’ our theme, its associated boundaries and ultimately the investable universe for the strategy. We set boundaries around what can and can’t be considered appropriate for the strategy in question.

At this stage, we minimise adverse impacts through product- and behaviour-based exclusions. Recognising that even companies in positive thematic areas could have an adverse impact on society or the environment, we apply the first adverse impact minimisation filter as we define the investable universe. The adverse impacts are minimised through product- and behaviour-based exclusionary criteria at company and fund level.

- a. Product-based exclusion – we automatically exclude companies whose products or services are deemed to have critical negative impact to the health and safety of people and the environment from the investable universe. The full list of our exclusion criteria is outlined in our Responsible Investment Policy 2021 document.
- b. Behaviour-based screening – we also exclude companies which are not meeting their obligations to internally agreed norms and standards around human and labour rights, environmental protection, and business behaviour. These would be companies which commit systematic violations of such standards, or which have caused grave harm due to their failure to comply or act responsibly.

### Select

At the second stage of our investment process, we ‘Select’ companies that are suitable for investment. ESG Integration is central at this stage.

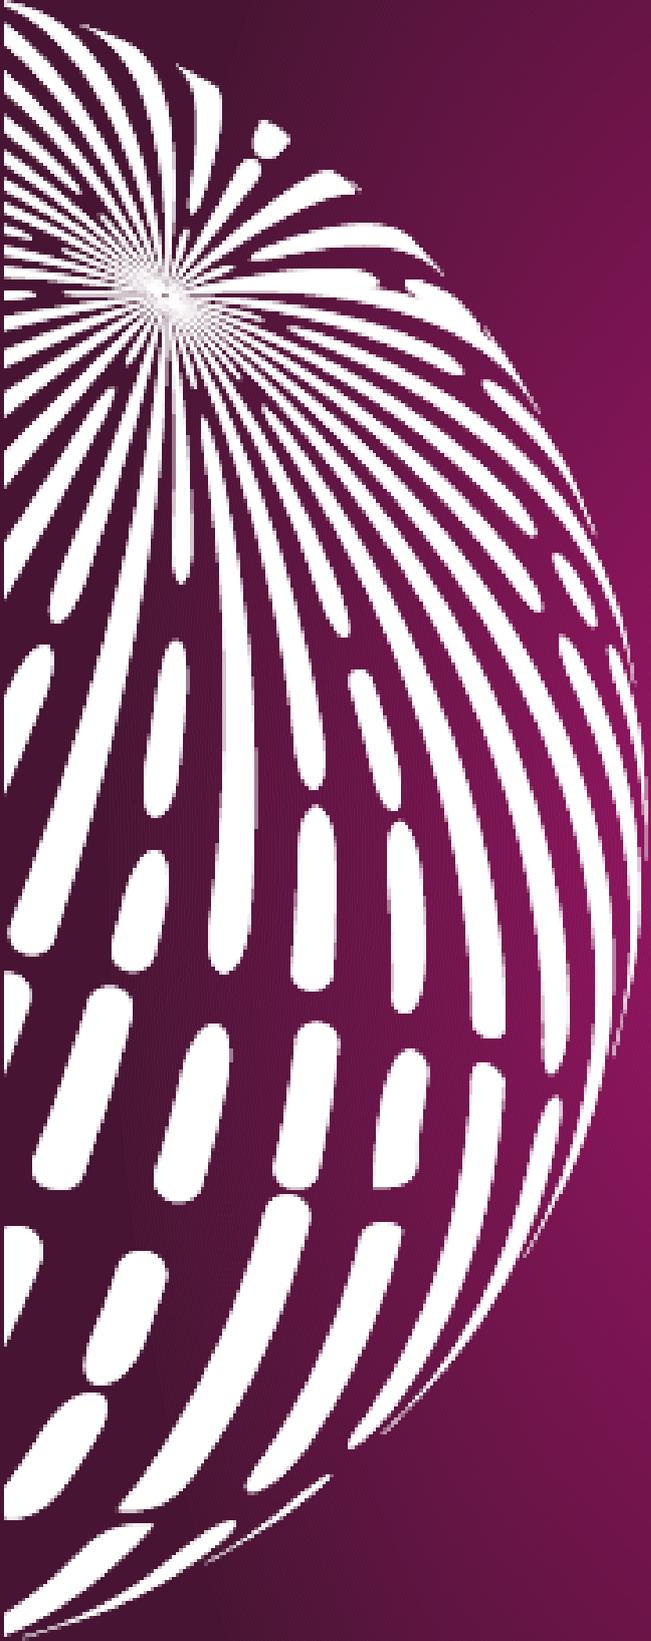

Our proprietary ESG scoring framework is used to assess the environmental, social, and governance risks and opportunities exposure of a security. It aims to mitigate potential ESG risks should they materialise, and to maximise the value created through the ESG focus. The policy provides guidelines to analyse and score stocks regarding the negative impact of their potential ESG risks and the positive impact of their ESG commitment.

The detailed scoring process, metrics and weightings used are discussed in details in our Responsible Investment Policy 2021 document.

### Act

The final phase defines how we ‘Act’, in terms of sizing positions within the portfolio, and how we actively manage those positions.

‘**Position Sizing**’ is defined using thresholds that take ESG scores into consideration. Finally, ‘**Shareholder Engagement**’ with companies on ESG issues and ‘**Proxy Voting**’ are core elements of our active ownership and engagement approach.

## RI Reporting and Controls

## Reporting

Within our monthly fund factsheets, as a supplement to the ‘conventional’ performance data presentation and overview of positioning etc., we include portfolio level ESG Risks (Controversies) and Opportunities (Impact) reporting data to supplement financial information with non-financial considerations. This is also available within our Fund presentations.

### Reporting of ESG Risks

In terms of ESG risk reporting relative to our reference index, (which in most cases for Thematics is the MSCI ACWI Index), we have taken the decision to report on the level of controversies within the portfolio and compare this to a reference index. Therefore, we have identified a range of categories for these controversies and use third-party data (ISS research) to screen for occurrences identified for the companies in both portfolios and indices. In terms of disclosures, we show a weighted average for the portfolio (and benchmark).

In order to provide some additional granularity, we also split the categories of controversies between Corporate Governance (‘G’) and Human Rights (‘HR’) risks. From a Governance standpoint, we particularly focus on controversies relating to corruption, financial accounting, competition, tax, and money transfers, while Human Rights scoring aims to identify problems both internally and among suppliers based on labour rights controversies such as freedom of association, forced labour, child labour and discrimination.

### Reporting of ESG Opportunities

In terms of how we report on ESG Opportunities, we believe that the United Nations Sustainable Development Goals (‘SDGs’) are the best, and most widely-accepted way to frame a company’s opportunities. With a long-term goal of investing with the intention of creating a more sustainable world, the achievement of the SDGs should be beneficial over a similarly long timeframe to the companies in which we invest.

#### The UN SDGs:

In order to be able to provide that data at both the portfolio level and the reference index level, we use third party data from ISS. The scores that we use consider companies that are both making positive and negative impacts relative to 15 Social and Environmental

objectives of the SDGs. We aim to deliver (and have delivered) strategies that contribute more positively towards the SDG achievement than the broader reference index.

From a Social perspective, there are 7 objectives:

7 Social Objectives – and their Corresponding UN SDG			
<b>Alleviating Poverty</b> 	<b>Combating Hunger &amp; Malnutrition</b> 	<b>Ensuring Health</b>  	<b>Providing Basic Services</b>   
<b>Delivering Education</b> 	<b>Attaining Gender Equality</b> 	<b>Safeguarding Peace</b> 	   

Source : ISS

The 8 Environmental objectives are:

8 Environmental Objectives – and their Corresponding UN SDG			
<b>Achieving Sustain. Agriculture &amp; Forestry</b>  	<b>Conserving Water</b> 	<b>Contributing to Sustain. Energy Use</b>  	<b>Promoting Sustain. Buildings</b> 
<b>Optimising Material Use</b> 	<b>Mitigating Climate Change</b> 	<b>Preserving Marine ecosystems</b> 	<b>Preserving Terrestrial Ecosystems</b> 

Source : ISS

For reporting purposes, the Thematics methodology uses ISS data to assess the products and services of the companies that we are analyzing to verify whether they contribute in a positive or negatively way from an Environmental ('E') and Social ('S') perspective, to the underlying SDGs, and scores them accordingly. The total score for each company equals the sum of the assessment for each company for all 15 objectives and can range from -10 (where 100% of sales contribute negatively to one or several SDGs), all the way up to +10 (where 100% of sales contribute positively to one or several SDGs).

From a reporting perspective, we publicly disclose information for both the E and the S pillars, meaning that the total ESG Opportunity score, or Impact score can be calculated by adding both together. Please note that the score provided is a weighted average score of names within the portfolio. We clearly disclose the percentages of non-covered names for full transparency.

**Selection of the relevant scores monitored**

At Thematics AM, we aim to be fully transparent in terms of monitoring portfolio-level ESG and Impact scores relative to each strategy’s relevant reference index. Consequently, we have opted for 3rd party scoring for both, primarily to remove ourselves from any potential industry debates about opaque scoring practices, but also to allow for greater and more direct comparability relative to other funds. As such, while we prize our proprietary analysis and scoring highly, such data is used exclusively in the ‘Select’ stage of our investment process, when we size and adjust positions in our portfolios. We would highlight that, in an effort not to ‘sole source’ all data from 1 provider, we have selected ISS for reporting data, and have chosen the ESG Risk scores provided by Sustainalytics for 4 of our 5 standalone strategies, AI & Robotics, Safety and Subscription Economy, and Wellness. We utilize the ISS data for the Water strategy.

### Implementation of selectivity monitoring

The ESG policy is implemented before and after stocks are acquired, while individual stock analysis is updated on a constant and ongoing basis. Indeed, Thematics AM receives and treats daily news flow and actuality on stock development (merger, acquisition, spin-off, delisting, controversies).

**Level 0:** Portfolio Managers are responsible for the initial control of the guidelines, having access to the list of stocks excluded of their universe as well as the research platforms and scores of third-party providers, including the one they are monitored against.

**Level 1:** The Risk department monitors, on a weekly basis, the score of the strategies vs their reference index. Portfolio managers receive a report of such analysis, flagging their current positioning vs their reference index, and alerting on any deviation to guidelines.

**Level 2:** The Compliance Officer of Thematics AM reviews the implementation of the policy as well as the risk monitoring implementation on an annual basis.

### ESG Risk Score Neutralisation

As the portfolio managers score the ESG risk for all stocks held in their strategy, but the monitoring is made out of external scores to be compared to larger reference indexes, they have the possibility to exceptionally neutralise some of these stocks in the ESG selectivity monitoring process. It can happen if the portfolio managers identify a non-alignment of ratings between data providers, a lack of disclosure, or some fundamental disagreement with the risk assessment score. Total exposure to stocks non covered and neutralised (ie covered but considered as not) can never exceed 10% of the portfolio.

### Communication resources used to provide investors with information about the SRI management of the funds
